Risk and Reward Profile

Risk Disclaimer

The Risk and Reward Indicator table demonstrates where the share class ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but also the greater risk of losing money. The ranking is based on historical data and it may change over time. It also may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table above shows the share class's ranking on the Risk and Reward Indicator.

Why is the fund in the specific category?

This share class is ranked at 6 because funds of this type have experienced high rises and falls in value in the past.

The indicator does not take into account the following risks of investing in this Fund:

Currency risk: The Fund may invest a small portion in companies from other parts of the world. Investing in companies from across the globe can be rewarding and can spread risk to different markets. This does, however, leave you open to the risk of currency rates and other factors reducing the value of your investment.

Asymmetric information risk: This Fund focuses its investments on stocks of companies that the Investment Manager believes are inexpensive relative to other stocks. These stocks are selected after careful disciplined review of publicly available information. There is a risk that important information is not disclosed, and that such information could have a negative impact on the value of the stock.

The Fund attempts to limit large price movements by investing in additional companies that it believes will limit the risk and reward. There is no guarantee that such actions will have the intended result.

For more information in relation to the risk factors applicable to the Fund, please see the section entitled "Certain Risk Factors" in the Company's Prospectus and the section entitled "Risk Factors" in the supplement in respect of the Fund.
